PLANTS AND SEEDS WHOSE SALES ARE PROHIBITED IN WASHINGTON STATE

A Summary of Current Regulations on Sales of Noxious Weeds and Other Invasive Exotic Plants

WAC 16-752-600 through 660

**Washington State
Department of Agriculture
Plant Protection Division
Plant Services Program
Revised June 2014**

WHY ARE SALES PROHIBITED?

Every year noxious weeds and other invasive exotic plants cost Washington millions of dollars in lost production, public and private control costs, and environmental degradation. These exotic introductions to Washington have displaced native plant communities, damaged range and recreational lands, and degraded fragile wetlands. Escaped ornamentals are one significant source of infestation. It is often difficult to predict which ornamentals will be invasive and aggressive. Scotch broom, purple loosestrife, and kochia are prime examples of plants which have escaped cultivation and caused enormous economic and environmental damage. The quarantines identify plants known to be invasive and a detriment to the state's natural resources. These regulations will serve to prevent the continued introduction of these problem plants into Washington.

WHICH PLANTS AND SEEDS ARE PROHIBITED?

Noxious Weed Seed and Plant Quarantine, WAC 16-752-600

It is prohibited to transport, buy, sell, offer for sale, or distribute plants or plant parts of the regulated species listed here into or within the state of Washington or to sell, offer for sale, or distribute seed packets of seed, flower seed blends, or wildflower mixes of these regulated species into or within the state of Washington.
