

## Water Discussion Course

### A Free Self-Directed Course for Small Groups

Ever wonder where your water comes from?

Where it goes?

How you and others impact it?

With miles of coastline, countless rivers, streams, lakes and wetlands, water is the link that connects our communities.

Confronting the challenges of water issues requires a new level of water wisdom from individual household users, communities, corporations and governments.

We all need to become more informed and engaged water citizens so that we can intelligently discuss difficult issues and work together for the best possible water solutions.

The water discussion course, Our Watershed: Pacific Northwest, was created to facilitate this process.

### Protecting our Watershed

The self-directed water course, *Our Watershed: Pacific Northwest*, was designed to:

- ◆ Provide basic knowledge about our water and watersheds
- ◆ Raise awareness about water issues confronting watersheds and the communities within them
- ◆ Provide a structure to learn more about our specific watersheds and actions an individual can take

The course was developed in a “study circle” format. A study circle is a small group of people who agree to meet to discuss an issue in depth. One of the participants facilitates the discussion for the session. The role rotates each week with a different group member facilitating the session.
