To Register
www.ewu.edu/cezikavirus

Learning Objectives:
1. Describe the epidemiology and clinical manifestations of Zika virus.
2. Summarize the availability of testing for Zika virus and the advantages and disadvantages of laboratory methods available.
3. Discuss appropriate screening questions for evaluation of Zika virus exposure.
4. Describe the public health response to Zika virus infection.

Application for CME credit has been filed with the American Academy of Family Physicians. Determination of credit is pending.

Session Presenters:

Anna Halloran
MHPA (Health Policy Administration; Washington State University), BS (Psychology; University of Idaho), BA (Spanish; University of Idaho), graduate certificate (Epidemiology of Infectious Disease; University of South Florida)

Halloran works as a communicable disease epidemiologist for Spokane Regional Health District, a local health jurisdiction in Washington State. Her work includes disease investigation for vector borne diseases, vaccine preventable diseases, bloodborne diseases and enteric illnesses. Previously, Halloran has worked in STD disease investigation and managing community indicators work.

John McCarthy, MD
MD (University of Washington), MS (Counseling Psychology; Gonzaga University), BS (Biology; Santa Clara University)

McCarthy currently serves as assistant dean for Regional Affairs for the University of Washington’s School of Medicine in eastern and central Washington; works as medical director and clinician for Native Project, a community health clinic in Spokane; and continues to fill the position of public health officer for Okanogan County. He is past president for the Washington Academy of Family Physicians (WAFP) and current president of the WAFP Foundation. He was Washington state’s family physician of the year in 2012, and Spokane’s physician citizen of the year in 2014. He is passionate about the value family medicine offers to the medical arena.
