Reviewing Transactions in PaymentNet4

Once you have logged in to PaymentNet4, click the “Transactions” button on the gray menu bar and then click the “Manage” button to access the transaction list. The result is a list of the transactions associated with your card for the last 30 days. This is the default query set by JPMC in PaymentNet4. Each user will have the ability to design and set your own custom query to fit your needs. See the instructions titled “Creating Queries and Viewing Transactions.”

Please note the scroll bar located inside the window of your web browser marked with the arrow. Scroll this to the right to see more fields related to the transactions. Depending on the size of your web browser, you may be able to see all of the fields or see only a few of the fields.

Once you have identified a transaction to review from the transaction list, place your cursor on the desired transaction to select it. The following screenshot will be the result:
During your process of reviewing this transaction, you will need to complete the Accounting Code and Transaction Custom Fields section. When that is completed, you finalize your review by marking the new “reviewed” box (noted with an arrow) and click “save”.

The Accounting Code section is set up to pull budget-project information from AIS. Only active accounts in AIS will be available for use.

Here is the screenshot of the Accounting Code Section.

Our budgets are broken up into three sections. Please see the example above. When completing this section, you must start from the top and work your way down. Each data component is dependent on the previous option. In this example, to code to travel should be 1133-4100. First select the appropriate Chart of Accounts, and then input the Budget-Project. **The best method for inputting your Budget-Project is to empty the field and begin typing it in.**
See below:

Once this has been completed continue down and input the object and the subject.

Next select the department-fund-program. Most often there will only be one option to select from as shown in the above example. If this is the case, please select it.

This is an example of an account that has multiple funding types. This allows for the reviewer to input which funding type is used in the coding of the expenditure by selecting the appropriate option.

Next we need to complete the Transactions Customs Field:
Complete the Fiscal Year (see the options above), the Travel Details, the Name of the Traveler. These need to be completed in the same manner we are currently using in the old PaymentNet Legacy system. The Fiscal Year selection should reflect when the dates of travel will occur. Once you are satisfied with the data, check the new reviewed box (noted below with an arrow) and click save. See below:

This completes the transaction review.

**NOTE:** The reviewed field shown boxed in the transaction example above will not be required and will be disabled for your use. The reviewed box marked with an arrow is how you should mark the transaction reviewed.
