WASHINGTON STATE UNIVERSITY

Type: ROUTINE INSPECTION

Date: Aug-18-2014

3.129 (a)

FEEDING.

A large container of prepared food is stored on the bottom shelf of a large refrigerator. The upper shelves hold various laboratory chemicals, including specimens in formalin-filled jars.

Food must not be stored below chemicals which may potentially spill and contaminate the food. The large refrigerator is next to a small refrigerator which is labeled for bat food. The labeled refrigerator contains smaller prepared food containers. Since there is a refrigerator designated for bat food storage, the bat food should be stored there and not with potentially hazardous chemicals.

Correct by close of business 8/22/2014.

The inspection and exit briefing were conducted with facility personnel.
