## Speech and Hearing Sciences: Preparation for Careers in Health Care and Education

Speech and Hearing Sciences emphasizes the physiological, neurological, behavioral, and psychological dimensions of normal and disordered communication across the human lifespan. The curriculum includes multicultural and global perspectives necessary to prepare students for success in a changing world.

The department in Speech and Hearing Sciences is based on WSU's beautiful downtown

Spokane health sciences campus at the intersection of downtown and the medical district. You'll feel at home in the health care focused environment where students and faculty emphasize inter-professional education, community outreach and research that prepares students for careers that emphasize multidisciplinary teams. The B.A. in Speech and Hearing Sciences is considered a pre-professional degree, allowing graduates to work within a number of healthcare, social / human resource services, and educational settings, while also providing the foundation for further study at the graduate level.

The U.S. Bureau of Labor Statistics projects faster than average growth for speech-language pathologists and audiologists through 2022. The government expects 26,000 new jobs for SLPs, an increase of 19%. Openings for audiologists are expected to grow by 34%, or 4,300 new jobs.

Students choosing to go on to graduate school to become speech-language pathologists (SLPs) and audiologists may pursue careers in private practice, hospitals, assistive living and skilled nursing facilities, rehabilitation set-

tings, early intervention settings, and public schools. The Master of Science degree is required to function as a speech-language pathologist. The Doctor of Audiology (Au.D) degree (or comparable degree) is required to function independently as an audiologist. Employers seeking out SLPs and audiologists frequently provide added incentives such as sign-on bonuses, relocation expenses, and continuing education funds, all in an attempt to be competitive in a market with a shortage of qualified applicants.

## Innovative Programs and Opportunities for Students

- Nationally recognized faculty with a broad range of expertise
- One-year post-baccalaureate program available for the returning, non-traditional student
- On-site clinic utilizing current evidence-based treatment approaches and cutting-edge technology
- Multi-modal teaching approaches, including face-to-face teaching, hands-on learning, and online courses
- Undergraduate students are given research opportunities, working in labs of faculty on current research projects.
- The local chapter of the National Student Speech-Language-Hearing Association gives students opportunities to meet others with similar interests.
- The speech-language pathology program is accredited nationally by the Council on Academic Accreditation of the American Speech-Language-Hearing Association and at the state level by the Board of Education.
- Opportunities for students to apply coursework to studies abroad and through international/community outreach programs

This degree program is appropriate if you are interested in pursuing a clinical career in speech-language pathology or audiology or graduate study in speech, language or hearing science research. It is also appropriate for students with interests in teaching, neuroscience, physiology, basic science, health care, linguistics, education, or psychology.

## Required Courses and Program of Study

Our goal is to maintain the highest academic standards while helping you advance toward your bachelor's degree. Students entering the major of Speech and Hearing Sciences complete all university common requirements (UCOREs) in the first two years at WSU Pullman. Upon completion of all university common requirements (or obtaining an AA degree at a community college), students transition (typically in the junior year) to the Spokane campus at the beginning of fall semester. An advisor works with each individual student to ensure the appropriate UCOREs are completed and that each student is prepared for entrance to the program.
