

# Levels of Learning

## \*Tips for higher levels of learning\*

- 1. The Study Cycle**
  - Short, frequent bouts of studying regularly
- 2. While studying, ask yourself:**
  - How, why, what-if questions!!!
  - How are things related? Different? Connected?
- 3. Use homework as an opportunity to test your understanding.**
  - Study for homework like you study for quizzes
  - Work on problems without looking at solved examples
  - Stuck? Give yourself 5 minutes to try to figure it out before looking ONLY at the first step of the solution.
- 4. Give verbal “mini lectures”**
  - Tests to see if you know material well enough to teach it
  - Helps identify gaps in your understanding
- 5. Use your textbooks! They provide examples, diagrams, pictures, and practice problems!**
