The Center for Sustaining Agriculture and Natural Resources (CSANR) exists to catalyze research, extension and educational activities that improve the sustainability of agriculture, natural resources and food systems in Washington State and around the world.

BIOAg (Biologically-Intensive Agriculture and Organic Farming) is an internal competitive grant program designed to catalyze WSU faculty engagement in biologically-intensive, organic and sustainable agriculture research and extension.

- Biologically-intensive agriculture includes farming practices and systems that rely on biological and ecological processes which are renewable, non-polluting, and mutually beneficial to farmers and society.
- Organic agriculture is a legally defined set of agricultural management practices (see USDA National Organic Program).
- Sustainable agriculture is economically viable, environmentally sound and socially just. The three dimensions are seen as co-equal.

**BIOAg Program: Request for Proposals**

**Goal:**
The goal of the BIOAg solicitation is to engage WSU faculty to advance the development, understanding, and use of biologically-intensive, organic and sustainable agriculture in Washington State. BIOAg funding can be requested for three purposes: to stimulate new research initiatives, to augment existing research to address critical gaps, and to move existing, game-changing research out into the world.

**History and Context:**
The BIOAg Program was established through a collaborative effort of WSU CSANR and concerned Washington stakeholders, with funding from the Washington State Legislature beginning in 2006. The program aims to help Washington farmers, ranchers and land managers develop, verify, and promote effective biologically-intensive, organic, and sustainable agriculture strategies on all types of farms and all aspects of Washington’s agriculture and food systems. The BIOAg program supports both incremental improvements and transformative ideas that redesign farm or food systems.

Applicants are encouraged to browse the [CSANR Grants Database](http://csanr.wsu.edu/csanr-grants/bioag-grant-program/) to get a sense of the breadth of projects funded. The database provides project reports, research outcomes, and
publications resulting from research previously funded under BIOAg. The database can be navigated by year, researcher, project type, or topic.

Award rates in recent years have ranged from 20-45% of submitted proposals. Investigators are highly encouraged to call and discuss proposal concepts with CSANR Director Chad Kruger (509-335-4605, cekruger@wsu.edu) prior to submission to ensure program relevancy and to increase competitiveness in the program. Final decisions regarding allocation of funding are dependent on the availability of funds.

**Overview of BIOAg Guidelines for FY22:**
In FY22 the BIOAg Program will fund Research, Extension, or Integrated BIOAg Project Grants.

The Principle Investigator must adequately describe how the proposed project is relevant to BIOAg and this solicitation.

*All PIs must describe how their proposed project addresses the social dimension of sustainability.* For example, if a proposal is focused on a specific technology or methodology, PI’s should explain how they will engage with individuals who might ultimately be impacted by the technology when applied, and/or how they will make sure that results reach under-represented audiences.

In FY22, special consideration will be given for proposals focused on equity and/or the social dimension of sustainability. This includes, but is not limited to, proposals that address how biologically intensive, organic, and sustainable agriculture strategies may impact people from under-represented communities, long-term social costs (e.g. true cost accounting), or how to increase engagement of minority or under-represented communities (e.g. farmworker, low income, other) in research and extension programs.

**Proposal Guidelines:**
- Project proposals for seed funding of new ideas must precisely articulate the expected extramural grant program targeted by the Investigator, including articulation of why that grant program is identified.
- Proposals should prioritize needs relevant to the state of Washington.
- Consistent with the intent of original partner support for the establishment of the Program, BIOAg funding may not be used to support the development or commercialization of crops and livestock using genetic engineering.

**Submission Guidelines:**
- Proposals must be submitted electronically using the attached template. Proposals that do not abide by the template will not be reviewed.
- Application instructions are included in the proposal template linked below. Follow the instructions precisely or your proposal will be disqualified.
• Additional pages (beyond the template provided) are limited to a 1-page document to provide two supplementary graphics or tables ONLY. Use of this additional document to expand narrative will disqualify the proposal.
• The Lead PI must be a WSU faculty member in good standing with the program (contact us if clarification is needed). Faculty members must limit their submissions as Lead PI to a single proposal and as co-PI to a single proposal.
• Graduate students may submit a proposal, but the graduate student's advisor must serve as the lead PI for contracting purposes.
• A PI may only have one active BIOAg Project each as PI or co-PI at a single time.
• Proposals from PIs new to the program are highly encouraged.
• PIs and co-PIs must provide a brief biographical sketch with their final proposal submission (USDA NIFA, NSF, or NIH format is appropriate).
• Except under extraordinary circumstances, BIOAg funding may not be used for faculty salary augmentation (i.e. summer salary, supplemental salary). If requested, a compelling justification must be submitted to request up to 10% FTE in salary.
• Salary accruals are not allowable.
• Salary may be requested for soft money funded faculty and staff.
• Projects that are leveraged with other grant or gift support are encouraged.
• Upon award notification, a BIOAg Grant Compliance Form that serves as the project contract will be required for awarded projects; the form will be reviewed and approved prior to the transfer of funds.

Any questions regarding the appropriateness of proposed topics or allowable expenses should be directed to the CSANR Director, Chad Kruger, cekruger@wsu.edu, 509-335-4605 (54605 from campus).

Details on Proposal Types and Timelines:

1. **BIOAg Project Grants** *(Research, Extension, or Integrated) are due by Wednesday, December 15, 2021*

   Description: Projects should develop, investigate, or demonstrate sustainability on farms or in food systems using BIOAg principles. These project grants are intended to seed exploration of new research ideas, overcome remaining technical/economic/social barriers to the use of existing BIOAg practices, and ensure that existing research is utilized. PIs must indicate Research, Extension or Integrated proposal. In the case of Integrated proposals, PIs must describe how the proposal integrates research and extension, and how the integration adds value. Use of BIOAg Project grants to support graduate students is highly encouraged.
Project Grant Awards: $10,000 – $40,000

**Letter of Intent for BIOAg Project Proposals – Requested by Monday, November 15, 2021**

Letters of intent are encouraged but not required. The letter of intent will be used to identify appropriate reviewers and potential additional collaborators. Please follow the format in the application instructions and submit to cekruger@wsu.edu as a Word document.

**Application Form and Instructions for BIOAg Letters of Intent and Project Proposals – Applications are due Wednesday, December 15, 2021.** Funding decisions will be finalized by mid-February 2022.

Funding is expected to be used between March 2022 and December 2023. One 6-month no-cost extension may be granted depending on progress and review. Excellent progress and efforts at leveraging funding will be expected.

**Proposal Review and Funding Decisions:**
Each BIOAg project proposal receives ad hoc review from two CSANR Advisory Committee members who evaluate topic relevance and predicted impact. Each proposal is also thoroughly reviewed and scored by at least one ad hoc scientist with relevant expertise in the subject area. These written reviews are compiled and shared with the selection panel, comprised of a rotating subset of the CSANR Leadership Team members. The selection panel members, who also independently score proposals, meet to review all submitted proposals, comments, and scores. Using all information available, the panel makes a funding recommendation. In recent rounds, funds are available for only 20-45% of proposals received. PIs are notified of the status of their proposal in mid-to-late February.
