Statement of Vision for Washington State University Extension

Vision Statement:
As part of the land grant mission, Washington State University Extension will be the premier lifelong education network providing innovative and adaptable science-based programs which enable all Washington residents and beyond to improve their profitability and quality of life”.

The following criteria must be met for this vision to be successful:

1. WSU Extension must continue its tradition of providing non-biased science based information while at the same time becoming more adept at communicating to an increasingly “science phobic” public.

2. WSU Extension must maintain local ties at the county level. This local connection has enabled Extension to be successful for the past century and is essential for future success and relevance.

3. WSU Extension needs to have a diverse portfolio of programs to meet the needs of an every growing and diversified clientele base while supporting our traditional clientele base.

4. WSU Extension should identify innovative approaches to new and sustainable funding sources to ensure continuation of programs while ensuring that current funds are used in the most efficient manner possible to meet clientele needs.

It is up to the faculty and staff to make the vision a reality. It is up the Assistant Director/Associate Dean to build support among upper administration as well as faculty, staff, students and constituents for the proposed vision and to provide the resources to make the vision a reality.
