

# Clallam County Gardening Calendar

## June

### Vegetables

- Direct seed arugula, chard, corn, cucumbers, lettuce, spinach, and squash into the garden. (See recommended varieties on back.)
- Transplant basil, cucumber, eggplant, pepper, squash, and tomato starts into garden. Cover if temperatures fall below 50 degrees.
- Stop harvesting asparagus when spears become smaller than a pencil; fertilize and allow tops to grow.
- Harvest no more than half of the stalks so remaining leaves can sustain crown. Stop harvesting rhubarb when plant begins to produce slender stalks.
- Stop watering garlic as it naturally starts to dry and harvest when 4 or 5 leaves are still green.
- Watch for leaf miners on beets, chard, and spinach; remove and discard infested leaves.
- Provide 1 inch of water weekly as rain tapers off.
- Mulch garden to retain moisture and reduce weed growth.

### Fruit trees

- Thin apples, pears, and plums when the size of a large marble. Thin plums to one fruit 2-4 inches apart on a branch and apples and pears to 1 to 2 fruits per cluster 6-8 inches apart on the branch.
- Watch for signs of brown rot, scab, and powdery mildew and spray with a fungicide registered for those problems following instructions on label.

### Berries

- Watch for gray mold on strawberries; remove and discard affected berries and leaves immediately.
- Fertilize blueberries with 2-8 Tbsp. ammonium sulfate per plant (once this month) (amount depends on age of plant) or 1 Tbsp. of fish emulsion diluted in 1 cup water (twice this month).
- Make sure berries get 1-2 inches of water weekly.
- Cover plants with net to protect against critters.
