

WEED OR PLANT IDENTIFICATION FORM

Fill out this form to accompany the specimen. If possible, keep a pressed specimen for reference.

Weeds are identified by **flowers** and **fruits/seeds**. Leaves, stems, buds, and roots may also aid in identification. Place the weed specimen in a plastic bag along with a **dry** paper towel (don't add water) and seal. To maintain freshness for easier identification, store the weed in a refrigerator until submitting or mailing sample. Samples must be received in local Extension Office on Monday, Tuesday, or Wednesday, in time to be packaged for outgoing mail.

Extension Office Contact: _____ Date _____
