

# LAMB CARCASS DATA – KITTITAS COUNTY FAIR – 2018

## INTRODUCTION AND EXPLANATION OF TERMS

Market lamb evaluation for 2018 was conducted using ultrasound technology. Lambs are ultrasounded between the 12<sup>th</sup> and 13<sup>th</sup> rib, the location where an actual carcass would be split in processing and where a grader would obtain measurements. The ultrasound measures the area of the rib eye and the thickness of external fat cover over the rib eye. The system of analysis used for the ultrasound data uses a combination of the directly measured ultrasound data and a leg score assigned by the fair judge. These four factors, along with a preliminary yield grade (PYG) calculated from the fat thickness, are combined into an Adjusted Yield Grade index that was used to rank the lambs. If there is a tie on the AYG, animals are further ranked using a cutability equation which estimates the amount of boneless, closely-trimmed, retail cuts (%BCTRC) on the carcass.

In addition to the customary placing and awards, Lamb of Merit certificates are presented to both the exhibitor and breeder of each Lamb of Merit.

For the lambs that didn't qualify for the Lamb of Merit award, the carcass variable that failed to meet the required specification is highlighted.

### LAMB OF MERIT SPECIFICATIONS

**Carcass Weight** – Carcass weight has been removed as a criterion since actual dressing percentages vary significantly and the estimate is not reliable enough. It is still used to calculate the required ribeye area.

**Loin eye area** – must exceed the required loin eye area for that carcass weight

**Back fat at 12<sup>th</sup> rib** – .15 to .25”

**Average Daily Gain** - .6 or higher

### Columns on Data Sheet

1. **Ear Tag Number**
2. **Carcass rank:** places Lambs of Merit using the AYG and cutability
3. **Exhibitor Name**
4. **Market Class Placing:** placing within the class at fair
5. **Pre-show weight:** weight at the June pre-show.
6. **Fair weight:** weight at fair weigh-in
7. **Fat thickness:** as measured by ultrasound
8. **Loin eye area**
9. **LEA Required**
10. **Leg Score-Estimates degree of finish**
11. **Average daily gain:** difference between the fair weight and the pre-show weight divided by the days on feed
12. **Estimated carcass weight:** live weight multiplied by .50
13. **Yield grade:** calculated from fat thickness; one rough estimate of cutability
14. **LEA +/-:** deviation from required LEA
15. **LEA adjustment:** addition or subtraction from preliminary yield grade based on the LEA +/-
16. **Leg score adjustment:** The leg score is an estimate of the conformation of the hind leg based on thickness and depth of the muscle (assigned by the fair judge); adj. is addition or subtraction from the adjusted YG based on leg score
17. **Fat thickness adjustment:** addition or subtraction from PYG based on fat thickness
18. **Adjusted yield grade:** sum of the preliminary YG (calculated from fat thickness and carcass weight) and columns 17-20 (less is better)
19. **Cutability:** a calculated estimate of % BCTRC using only an adjusted fat thickness and the rib eye area
20. **Lamb of Merit specification** – indicates whether the animal met the qualifications for Lamb of Merit
21. **Breeder**
22. **Club**
