

# LITTLEBITS

LittleBits are electronic building blocks. Each component does something different and can easily connect to another with a magnetic snap. The modules snap together using magnets and are connected in a sequence, to make a circuit. For people without electronics skills LittleBits is a perfect way to start learning how electronics work.

Combine LittleBits with Legos, cardboard & wheels to design and create inventions.

Age Level: 8+; 3rd-12th grade

Group Size: 10 to 12

Time: 4+ hours. Allow time to experiment on how pieces work, then allow time to create prototype and design.

Applications: Engineering, Design, Prototyping

County Available: Pierce

### Kit Contains:

- LittleBits
- Storage Box
- Educators Guide which includes lessons and design challenges
- Makers Guide
