

# Basic Spending Plan Worksheet

## Overview

- The first step is to determine how much income you have every month in the form of financial aid and/or income from a job.
- How many months you divide your aid into may depend on a number of factors including summer stay, employment, etc.
- If you have a job or work study, you will want to estimate how much you make in a month and add that to the monthly aid figure you determined.

Next, you will need to add up all of the expenses you pay over the course of a month.

- **Fixed expenses** are obligation you have to pay.
- **Flexible expenses** are things you may need, but the cost will vary each month.
- **Discretionary expenses** are things you want, but don't need.

After adding each category of expenses, you will have your total monthly expenses.

Add fixed, flexible, and discretionary expenses to get your total expenses.

Total Fixed	
Total Flexible	
Total Discretionary	
<b>Total Monthly Expenses =</b>	

Subtract your monthly expenses from your month income to see what is left over.

Monthly Income	
(-) Monthly expenses	
<b>Total funds left over =</b>
