

Secondary Labeling System

The primary labeling for chemical containers is the original manufacturers' labeling system.

Secondary containers filled from the primary chemical container require labels so that occupants will be aware of the contents of the container. WSU's Laboratory Safety Manual section II.H provides complete information on labeling requirements.

****Acetone wash bottles fall in this category.**

Secondary containers are required to be labeled with:

- chemical or common name
- hazard warning (HMIS system or equivalent)

If an alternative method of labeling (tags, shelf labels, etc.) is used please describe it below:

The person(s) responsible for ensure all labeling is completed in this laboratory is (Name and title):
