

NSSE 2014 Respondent Profile

Washington State University

NSSE 2014 Respondent Profile About This Report

The Respondent Profile presents both student- and institution-reported demographic information, allowing you to examine similarities and differences between your students and those at your comparison group institutions. This report uses information from all randomly selected or census-administered students. The display below highlights important details in the report to keep in mind when interpreting your results. For more information please visit our Web site (nsse.iub.edu) or contact your NSSE Project Services team.

- 1. Class level: As reported by your institution.
- . *Item numbers:* Numbering corresponds to the survey facsimile included in your *Institutional Report* and available on the NSSE Web site.
- Item wording and variable names: Survey items are in the same order and wording as they
 appear on the instrument. Variable names are included for easy reference to your data
 file and codebook.

- 4. Response options: Response options are worded as they appear on the instrument.
- Count and column percentage (%): The Count column contains the number of students who
 selected the corresponding response option. The column percentage is the weighted percentage of
 students selecting the corresponding response option.

Note: Column percentages are weighted by institution-reported sex and enrollment status. Comparison group percentages are also weighted by institutional size. Counts are unweighted and cannot be used to replicate column percentages. For details visit: nsse.iub.edu/html/weighting.cfm
