We teach ways to create resilient landscapes that are adapted to our changing climate.

We promote integrated pest management to minimize polluted runoff.

We promote water-wise gardening and landscaping practices to conserve water.

We encourage building healthy soils to prevent depletion and ensure the long-term viability of local food security & natural resources.

We promote sustainable techniques to growing local food to improve individual & community health and wellness.

We teach ways to help native bees and other pollinators thrive in home and community landscapes.

We promote stewardship of diverse ecosystems through invasive species management, native species conservation and restoration in landscapes.

We seek to increase access to plants, green spaces, and public landscapes to benefit the health & well-being of all members of our communities.

We teach landscaping principles to reduce the risk of loss due to wildfire.
