February 2002

Todd Simmons is a VSP Research Aide based at the Cooperative Park Studies Unit, University of Idaho. Margaret Littlejohn is VSP coordinator, National Park Service, based at the Cooperative Park Studies Unit, University of Idaho. We thank the staff and volunteers of Biscayne National Park for their assistance with this study. The VSP acknowledges the Public Opinion Lab of the Social and Economic Sciences Research Center, Washington State University, for its technical assistance.

Visitor Services Project
Biscayne National Park
Report Summary

- This report describes the results of a visitor study at Biscayne National Park during March 3-11, 2001. A total of 605 questionnaires were distributed to visitors. Visitors returned 380 questionnaires for a 62.8% response rate.
- This report profiles Biscayne National Park visitors. A separate appendix contains visitors' comments about their visit. This report and the appendix include summaries of those comments.
- Thirty-three percent of visitor groups were groups of two. Thirty-eight percent of the visitor groups were family groups. Thirty-one percent of visitors were aged 36-45.
- United States visitors were from Florida (80%), Pennsylvania (2%), Michigan (2%), and 27 other states and Washington, D.C. Nine percent of all visitors were international, with 45% from Canada, 14% from Cuba, and 8% from Germany.
- Most visitor groups (77%) spent less than a day at the park and 19% spent one or two days. Of those groups that spent less than a day at the park, 30% spent seven or more hours.
- On this visit, the most common activities were nature viewing (53%), walking/ hiking (48%) and fishing (31%).
- Previous visits (64%), friends or relatives (38%), and travel guides/ tour books (13%) were the most used sources of information about the park prior to visiting.
- Fifty-six percent of visitor groups reported that visiting Biscayne National Park was a primary reason for visiting the area, followed by boating (49%).
- The most commonly visited sites in the park were Elliot Key (34%), Boca Chita Key (33%), Dante Fascell Visitor Center (31%) and Black Point Marina (26%).
- In regard to the use, importance and quality of visitor services and facilities, it is important to note the number of visitor groups that responded to each question. The services that were most used by 335 respondents were the restrooms (76%) and parking (58%). According to visitors, the most important services were campgrounds (93% of 40 respondents) and docks (92% of 167 respondents). The highest quality services were the visitor center (93% of 112 respondents) and the visitor center video (92% of 50 respondents).
- Seventy-two percent of visitor groups indicated that recreational fishing is an appropriate activity in Biscayne NP, 13% indicated it was not, and 15% were not sure. Forty-five percent of visitor groups indicated that additional controls should be placed on fishing activities as the number of recreational fisherman and number of fish harvested increase with increasing numbers of visitors.
- Eighty percent of visitor groups rated the protection of water quality and flow as "extremely important." Seventy-nine percent of visitor groups rated coral reef protection as "extremely important."
- The average visitor group expenditure was \$275. The average per capita expenditure was \$85. The median visitor group expenditure (50% of group spent more, 50% spent less) was \$85. Sixteen percent of visitor groups spent no money and 41% spent between \$1 and \$100 in total expenditures in Biscayne NP. Of the total expenditures by groups, 22% was for gas and oil and 19% was for groceries and take-out food.
- Eighty-eight percent of visitor groups rated the overall quality of visitor services at Biscayne National Park as "very good" or "good." One percent of groups rated the overall quality of visitor services as "very poor."

INTRODUCTION

This report describes the results of a study of visitors at Biscayne National Park, also referred to as Biscayne NP. This visitor study was conducted March 3-11, 2001 by the National Park Service (NPS) Visitor Services Project (VSP), part of the Cooperative Park Studies Unit at the University of Idaho.

A **Methods** section discusses the procedures and limitations of the study. A **Results** section follows, including a summary of visitor comments. Next, an **Additional Analysis** page helps managers request additional analyses. The final section has a copy of the **Questionnaire**. The separate appendix includes comment summaries and visitors' unedited comments.

Most of this report's graphs resemble the example below. The large numbers refer to explanations following the graph.

① Figure 4: Number of visits

- 1: The figure title describes the graph's information.
- 2: Listed above the graph, the 'N' shows the number of visitors responding and a description of the chart's information. Interpret data with an 'N' of less than 30 with **CAUTION!** as the results may be unreliable.
- 3: Vertical information describes categories.
- 4: Horizontal information shows the number or proportions in each category.
- 5: In most graphs, percentages provide additional information.

METHODS

Questionnaire design and administration

The questionnaire for this visitor study was designed using a standard format that has been developed in previous Visitor Services Project studies. A copy of the questionnaire, and the Spanish translation, are included at the end of this report.

Interviews were conducted with, and questionnaires were distributed to, a sample of visitors who arrived at Biscayne National Park during the period from March 3-11, 2001. Interviews were conducted in English and Spanish. Visitors were sampled at 8 locations (see Table 1) with 576 English and 29 Spanish questionnaires distributed.

Table 1: Questionnaire distribution locations

Location	Questionnaires				
	Total number distributed	%	Total % returned	Spanish distributed	Spanish % returned
Dante Fascell Visitor Center	204	34	71	8	25
Boca Chita Key	92	15	70	6	33
Black Point Marina	68	11	53	1	0
Elliot Key	67	11	16	2	100
Crandon Park Marina	53	9	42	6	17
Moored boats	49	8	55	0	0
Homestead Bayfront Marina	36	6	58	1	100
Matheson Hammock Marina	36	6	58	5	40
GRAND TOTAL	605	100	n/a	29	n/a

Visitor groups were greeted, briefly introduced to the purpose of the study, and asked to participate. If visitors agreed, an interview, lasting approximately two minutes, was used to determine group size, group type, and the age of the adult who would complete the questionnaire. These individuals were then given a questionnaire and asked their names, addresses and telephone numbers in order to mail them a reminder/thank you postcard. Visitor groups were asked to complete the questionnaire during or after their visit and then return it by mail.

Two weeks following the survey, a reminder-thank you postcard was mailed to all participants. Replacement questionnaires were mailed to participants who had not returned their questionnaires four weeks after the survey. Seven weeks after the survey, second replacement questionnaires were mailed to visitors who still had not returned their questionnaires.

Questionnaire design and administration (continued)

Returned questionnaires were coded and the information was entered into a computer using a standard statistical software package—Statistical Analysis System (SAS). Frequency distributions and cross-tabulations were calculated for the coded data, and responses to open-ended questions were categorized and summarized.

Data analysis

This study collected information on both visitor groups and individual group members. Thus, the sample size ("N"), varies from figure to figure. For example, while Figure 1 shows information for 369 visitor groups, Figure 3 presents data for 1,276 individuals. A note above each graph specifies the information illustrated.

Sample size, missing data and reporting errors

Occasionally, a respondent may not have answered all of the questions, or may have answered some incorrectly. Unanswered questions result in missing data and cause the number in the sample to vary from figure to figure. For example, although 380 questionnaires were returned by Biscayne National Park visitors, Figure 1 shows data for only 369 respondents.

Questions answered incorrectly due to carelessness, misunderstanding directions, and so forth turn up in the data as reporting errors. These create small data inconsistencies.

Limitations

Like all surveys, this study has limitations that should be considered when interpreting the results.

1. It is not possible to know whether visitor responses reflect actual behavior. This disadvantage applies to all such studies and is reduced by having visitors fill out the questionnaire soon after they visit the park.

2. The data reflect visitor use patterns of visitors to the selected sites during the study period of March 3-11, 2001. The results do not necessarily apply to visitors during other times of the year.

3. Caution is advised when interpreting any data with a sample size of less than 30, as the results may be unreliable. Whenever the sample size is less than 30, the word "**CAUTION!**" is included in the graph, figure or table.

Special conditions

Weather conditions during the visitor study were typical of March in the Biscayne area, with warm, sunny days, and the occasional thunderstorm. High winds and cold temperatures occurred on some days, possibly decreasing the number of visitors to the park.

RESULTS

At Biscayne National Park, 630 visitor groups were contacted, and 605 of these groups (96%) accepted questionnaires.

Visitors contacted

Questionnaires were completed and returned by 380 visitor groups, resulting in a 62.8% response rate for this study.

Table 1 compares age and group size information collected from the total sample of visitors contacted with that from those who actually returned questionnaires. Based on the variables of respondent age and visitor group size, non-response bias was judged to be slightly significant. The ages and group sizes reported by actual respondents were higher than the ages and group sizes reported during the initial interview. This may be due to underreporting of both variables during the initial interview and that visitors interpreted the questions differently. Younger visitors and smaller groups are underrepresented. Group size and age data should be treated with some caution, and other data that may differ by age or group size should be examined carefully.

Table 2: Comparison of total sample and actual respondents

Variable	Total sample		Actual respondents	
	N	Avg.	N	Avg.
Age of respondents	603	42.5	361	45.2
Group size	600	3.8	371	5.8

Figure 1 shows visitor group sizes, which ranged from one person to 63 people. Thirty-three percent of visitor groups consisted of two people, while another 20% consisted of three people. Thirty-eight percent of visitor groups were made up of family members, 29% were made up of friends, and 24% were made up of family and friends (see Figure 2). Groups listing themselves as "other" for group type included fishing guides and Boy Scout groups. Fifty-eight percent of visitors were male, and 42% were female (see Figure 3).

Demographics

Most visitor groups (88%) preferred to speak and write English, followed by Spanish (6%) and French (3%). "Other" languages visitors preferred to speak and write included: Japanese, Dutch, Portuguese,

Italian, Russian, Italian, and Swedish.

Demographics (continued)

Thirty-one percent of the visitors were in the 31-45 age group and 21% were in the 51-65 age group (see Figure 6). Another 11% of visitors were in the 10 or younger age group. Forty-nine percent of visitor groups earned \$40,000 or less, while 33% earned between \$40,000 and \$80,000. Seventy-five percent of visitors did not identify themselves as of Hispanic or Latino ethnicity (see Figure 7). Ninety-five percent of visitors identified themselves as White, 2% as Asian, and 2% as Black or African American (see Figure 8).

Visitors were asked to list the number of visits they had made to the park during the past 12 months (including this visit) and also from two to five years ago. Thirty-two percent of visitors indicated they had visited only once in the past 12 months, while another 69% said they had visited more than once (see Figure 9). During the past five years, 43% had visited 10 or more times (see Figure 10).

International visitors to Biscayne National Park comprised eleven percent of the total visitation and the countries most often represented were Canada (45%), Cuba (14%) and Germany (8%), as shown in Table 3. The largest proportions of United States visitors were from Florida (80%), Pennsylvania (2%), and Michigan (2%). Smaller proportions of U.S. visitors came from another twenty-seven states and Washington, D.C. (see Map 1 and Table 4).

Texas	7	1	1
Washington	7	1	1
20 other states and Washington D.C.	61	6	5

Length of stay

Visitor groups were asked how much time they spent at Biscayne National Park. Seventy-seven percent of visitor groups spent less than one day at the park and 19% spent one or two days (see Figure 11). Of the groups that spent less than a day at the park, 50% reported that they spent from two to five hours at the park while 40% spent six hours or more (see Figure 12).

Figure 11: Days spent at Biscayne NP

Figure 12: Hours spent at Biscayne NP by visitors spending less than one day

Figure 13 shows the proportions of visitor groups that participated in a variety of activities at Biscayne NP. The most common activities were nature viewing (53%), walking/ hiking (48%), and fishing (31%). Visitor groups were also asked to specify certain types of activities they participated in. For example, nature viewing had separate categories of birding, fish/ coral, and general scenery. Figure 15 shows that 76% of visitors viewed general scenery, 41% viewed fish/ coral, and 33% went birding.

In addition, visitor groups were asked to indicate in which part of the park they had participated in the activities. As shown in Figure 16, South Biscayne Bay was the most common place visitors went birding (32%), followed by the Islands (27%) and the mainland (23%).

Figures 14 through 38 show the activities that visitors participated in and the locations for those activities. Other fishing activities as listed by visitor groups were food fishing and bottom fishing. "Other" activities listed by visitor groups were sunbathing, meeting friends, and playing frisbee.

Figure 45: Zone 7—South Coral Reef Platform activities

Figure 46: Zone 8—Sands Cut activities

Visitor groups were asked to indicate the sources from which they had received information about Biscayne National Park prior to their visit. Sixty-four percent of visitor groups received information during previous visits, 38% received information from friends or relatives, and 13% received information from travel guides and tour books (see Figure 47). Twelve percent of visitor groups received no information prior to their visits. "Other" sources of information used by visitor groups included living or growing up nearby, signs on US 1, and fishing guides. As shown by Figure 48, most (83%) of visitor groups indicated that they had received the information that they needed, while 9% had not, and 8% were not sure. Table 5 lists the information needed by visitor groups that they did not receive.

Other comments	3

Visitor groups were asked to indicate how their visit to Biscayne NP fit into their travel plans. Fifty-six percent of visitors to Biscayne NP said it was their primary destination, 26% as one of several destinations, and 18% had not planned on visiting (see Figure 49). Other primary destinations included Everglades NP, the Keys, and fishing in the Gulf Stream.

As shown in Figure 50, boating (49%) was the primary reason for visiting, followed by viewing scenery/ sightseeing (42%) and fishing (29%). "Other" reasons for visiting were sunbathing, camping, and family celebrations.

Travel plans/ Reason for visiting

Figure 49: Biscayne NP as part of travel plans

Figure 50: Reasons for visiting

Visitor groups were asked to indicate the forms of both land and water transportation that they had utilized during their visit to Biscayne National Park. As shown by Figure 51, the most commonly used forms of land transportation were private vehicles (88%), rental vehicles (11%), and bicycles (2%). One "other" form of land transportation used by visitors was walking.

For water transportation, private motor boats were primarily used (84%), followed by the concession tour boat (5%), private sail boats (5%) and canoe/ kayak (5%), as shown in Figure 52. Swimming was another form of water transportation used by visitors.

Transportation

Figure 51: Land transportation used to visit Biscayne NP

Figure 52: Water transportation used to visit Biscayne NP
(Note: The glass-bottom tour boat was not operational during part of the survey period.)

Visitor groups were asked to indicate the sites they had visited at Biscayne National Park and the order in which they had visited them. As shown in Figure 53, the most commonly visited sites were Elliot Key (34%), Boca Chita Key (34%), Dante Fascell Visitor Center (31%) and Black Point Marina (26%). The least visited site was Fowey Rocks Tower (5%). "Other" sites visited included Turkey Point and Crandon Marina.

Sites visited

Figure 54 shows the proportion of visitor groups who visited each site first during their visit to the park. The sites most frequently visited first included Dante Fascell Visitor Center (25%), Black Point Marina (22%), and Bayfront Marina (16%). The sites visited first by the fewest number of visitor groups were Adams Key and the Pacific Reef (each <1%). "Other" sites visited included the Pacific Reef and Biscayne Flats.

Figure 53: Sites visited in Biscayne NP

Figure 54: Sites visited first in Biscayne NP

Visitor groups were asked to note the park services and facilities they used during their visit to Biscayne National Park. As shown in Figure 55, the services and facilities that were most commonly used by visitor groups were restrooms (76%), parking (58%), docks (54%) and the visitor center (37%). The least used service or facility was access for the disabled (4%).

Visitor services and facilities: use, importance and quality

Figure 55: Services and facilities used

Visitor groups rated the importance and quality of each of the services and facilities they used. The following five point scales were used in the questionnaire:

<p>IMPORTANCE</p> <p>5=extremely important</p> <p>4=very important</p> <p>3=moderately important</p> <p>2=somewhat important</p> <p>1=not important</p>	<p>QUALITY</p> <p>5=very good</p> <p>4=good</p> <p>3=average</p> <p>2=poor</p> <p>1=very poor</p>
---	---

Figure 56 shows the average importance and quality ratings for visitor services and facilities. An average score was determined for each service or facility based on ratings provided by visitors who used that service or facility. This was done for both importance and quality, and the results are plotted on the grid shown in Figure 56 and detailed in Figure 57. All services and facilities were rated as above "average" both in importance and quality. It should be noted that the park newspaper, ranger-led programs, access for disabled visitors, mooring buoys, and the concession boat tour were not rated by enough people to provide reliable data.

Figures 58 show the importance ratings that were provided by visitor groups for each of the individual services and facilities. Those services and facilities receiving the highest proportion of "extremely important" or "very important" ratings included campgrounds (93%), docks (92%) and parking (90%). The highest proportion of "not important" ratings was for campgrounds (3%).

Figures 66-81 show the quality ratings that were provided by visitor groups for each of the individual services and facilities. Those services and facilities receiving the highest proportion of "very good" or "good" ratings included the visitor center (93%), the visitor center video (92%) and assistance from park staff (91%). The highest proportion of "very poor" ratings was for restrooms (7%).

Figure 82 combines the "very good" and "good" quality ratings and compares those ratings for all of the services and facilities.

Visitor groups were asked: "For any of the following elements that you and your group experienced in Biscayne National Park, please indicate how they affected your park experience." As shown in Figures 91-96, the majority of visitors indicated "no effect" for each of the six elements included in the question. Thirty-five percent of visitor groups indicated that noise from other visitors detracted from their experience (see Figure 86). Thirty-six percent of visitors indicated that the number of boats at anchorages detracted from their experience (see Figure 87). Other park elements that distracted from visitor experience included loud music and personal watercraft.

Visitor groups were asked to rate the importance of protecting certain resources at Biscayne NP. As shown in Figures 97-106, the majority of visitor groups rated the protection of all the park resources in the question as "moderately" to "extremely" important. Coral reef protection (96%), water quality and flow (94%), and original Keys habitat protection (92%) ranked high in importance (see Figures 97, 106 and 98, respectively).

Protection of park resources

Figure 105: Importance of endangered species protection

Figure 106: Importance of water quality and flow protection

Visitor groups were asked if their visit to Biscayne National Park started at a marina. Fifty-six percent of visitors groups indicated that their visit had begun at a marina, while 44% indicated that it had not (see Figure 107). Thirty-nine percent of visitor groups indicated that their trip began at Black Point Marina, 22% indicated Bayfront Marina and 18% indicated Matheson Marina (see Figure 108). "Other" marina locations indicated by visitor groups included the Dinner Key Marina and Sunset Harbor Marina. Figure 109 shows other locations where visitor groups started their trip. "Other" starting locations indicated by visitor groups included home, Everglades NP and the Yacht Club.

Use of marinas at Biscayne National Park

Figure 107: Did this visit start at a marina?

Figure 108: Marina location where trip began

Figure 109: Other locations where this visit began

Visitor groups were asked a number of questions concerning fishing in Biscayne NP. Most visitor groups (72%) said that recreational fishing is an appropriate activity in Biscayne NP, 13% indicated it was not, and 15% were not sure (see Figure 110). Visitor groups were asked: "As the number of recreational fisherman and number of fish harvested increase with increasing number of visitors, do you think Biscayne National Park managers should place additional controls on fishing activity?" Forty-five percent of visitor groups said that additional controls should be placed on fishing activities, 27% said that additional controls should not be put in place, and 27% were not sure (see Figure 111).

Fishing in Biscayne National Park

Visitors groups were asked: "If you went fishing on this visit to Biscayne National Park, what are the most important factors that result in a successful fishing experience to you?" Table 7 describes the importance rankings visitor groups gave to factors resulting in a successful fishing experience. About two-thirds of the visitors (66%) said they did not fish on this visit. Figure 112 shows the top two rankings visitors gave to each fishing factor. "Other" factors that resulted in a successful fishing experience were accessibility, catch and release fishing, and spending time with family.

Lastly, visitor groups were asked: "In order to protect the number of species of fish and shellfish, and numbers of each species, the following management techniques may be used in Biscayne National Park. What is your opinion about each of the following techniques?" Figures 113-118 show the approval ratings given by visitors concerning various fishery management techniques that may be used in Biscayne NP. The highest "approve" and "strongly approve" ratings were for minimum size limits on number of fish or shellfish of a particular species (86%), maximum catch limits on number of fish or shellfish of a particular species (85%), and seasonally restricted zones to limit harassment of spawning fish (78%), as shown in Figures 116, 117, and 115, respectively. As shown in Figure 118, the highest "disapprove" and "strongly disapprove" ratings were for catch and release fishing only (42%).

Figure 110: Appropriateness of recreational fishing in Biscayne National Park

Mooring buoys use in Biscayne National Park

Most visitor groups (89%) did not use mooring buoys while at Biscayne NP, while 8% did use mooring buoys, and 3% could not remember (see Figure 119). Figure 120 describes the reasons visitors used mooring buoys at Biscayne NP. Reef diving (39%), snorkeling (36%), and fishing (33%) were the most common uses, while shipwreck diving (6%) was the least common use. One "other" reason visitors stopped at mooring buoys was to catch bait fish.

Figure 119: Mooring buoy use

Figure 120: Reasons for using mooring buoys

Lodging

Visitor groups were asked a series of questions about their use of lodging while visiting Biscayne NP and the surrounding area. Figure 121 shows that 70% of visitor groups did not spend the night away from home within the Miami and/or the Florida City/Homestead area while on their visit. Thirty percent of visitors did spend the night away from home while on their visit.

Those visitors that did spend the night away from home were then asked to provide the number of nights spent in the Miami and/or Florida City/Homestead areas. Fifty-nine percent of visitor groups spent between one and three nights in the Florida City/Homestead area, and 22% spent eight or more nights in that area (see Figure 122). Figure 123 shows the proportions of types of lodging used in the Florida City/Homestead area including lodge, motel, cabin, etc. (49%); campground/trailer park (28%); and residence of friends (9%). "Other" types of lodging used in the Florida City/ Homestead area included rented apartments and boats.

Over one-half of visitor groups (58%) spent between one and three nights in the Miami area, and another 18% spent no nights in that area (see Figure 124). Figure 125 shows the proportions of types of lodging used in the Miami area including campground/ trailer park (30%); lodge, motel, cabin, etc. (29%); and residence or friends (24%). "Other" types of lodging used in the Miami area were hostels and boats.

Figure 122: Number of nights spent in Florida City/ Homestead area

Figure 123: Type of lodging used in Florida City/ Homestead area

Figure 124: Number of nights spent in Miami area

Figure 125: Type of lodging used in Miami area

Visitor groups were asked to list the amount of money they had spent both inside Biscayne NP and in the Florida City/ Homestead area on this visit. Groups were asked to indicate the amounts they spent for lodging; camping fees; guide fees and charges; restaurants and bars; groceries and take-out food, gas and oil; other transportation expenses; admissions, recreation, entertainment fees; and all other purchases.

Expenditures

Total expenditures in and out of park: Sixteen percent of visitor groups spent no money and 41% spent between \$1 and \$100 in total expenditures in Biscayne NP and the surrounding area (see Figure 126). Of the total expenditures by groups, 21% was for gas and oil, 18% was for groceries and take-out food, 16% was for restaurants and bars and 10% was for camping fees and charges (see Figure 127).

The average visitor group expenditure during this visit was \$275. The median visitor group expenditure (50% of groups spent more and 50% of groups spent less) was \$75. The average per capita expenditure was \$85.

In addition, visitors were asked to indicate how many adults (18 years and older) and children (under 18 years) were covered by their expenditures. Figure 128 shows that 55% of the visitor groups had two adults. Figure 129 show that 54% of the visitor groups had one or two children under 18 years of age.

Figure 126: Total expenses in Biscayne NP and Florida City/ Homestead area

Figure 127: Proportions of expenses in Biscayne NP and Florida City/ Homestead area

Figure 128: Number of adults covered by expenses

Figure 129: Number of children covered by expenses

Expenditures inside park

Total expenditures in the park: 41% percent of visitor groups spent no money in Biscayne NP and another 54% spent between \$1 and \$100 in total expenditures in the park on this visit (see Figure 130).

All other purchases accounted for 54% of total expenditures in the park, followed by admission, recreation, and entertainment fees (45%), as shown in Figure 131.

Admissions, recreation, and entertainment fees in the park: Forty-seven percent of visitor groups spent no money on admission, recreation, and entertainment fees in Biscayne NP, while 39% spent between \$1 and \$25 (see Figure 132).

Other purchases in the park: Seventy-four percent of visitor groups spent no money on other purchases in Biscayne NP; 18% spent between \$1 and \$25 (see Figure 133).

Figure 130: Total expenditures in park

Figure 131: Proportion of expenditures in park

Figure 132: Expenditures for admissions, recreation and entertainment fees in park

Figure 133: Expenditures for all other purchases in park

Total expenditures: Thirty-four percent of visitor groups spent between \$1 and \$100 in total expenditures out of the park during this trip (see Figure 134).

Expenditures outside park

Gas and oil accounted for 22% of total expenditures out of the park, followed by 19% for groceries and take-out food, as shown in Figure 135.

Hotels, motels, cabins, B&B, etc. out of the park: Most visitor groups (82%) spent no money on lodging out of the park (see Figure 136).

Camping fees and charges out of the park: Seventy-four percent of visitor groups spent no money on camping fees and charges out of the park. (see Figure 137).

Guide fees and charges out of the park: Most visitor groups (91%) spent no money on guide fees out of the park (see Figure 138).

Restaurants and bars out of the park: Sixty-three percent of visitor groups spent no money on restaurants and bars out of the park, while 16% spent between \$1 and \$50 (see Figure 139).

Groceries and take-out food out of the park: Thirty-nine percent of visitor groups spent no money on groceries and take-out food out of the park, while 37% spent between \$1 and \$50 (see Figure 140).

Gas and oil out of the park: Thirty percent of visitor groups spent no money on gas and oil out of the park, while 42% spent between \$1 and \$50 (see Figure 141).

Other transportation expenses out of the park: Most visitor groups (84%) spent no money on other transportation expenses out of the park (see Figure 142).

Admissions, recreation, and entertainment fees out of park: Sixty-nine percent of visitor groups spent no money on admissions, recreation, and entertainment fees out of the park, while 22% spent between \$1 and \$25 (see Figure 143).

Other purchases out of park: Over one-half of the visitor groups (69%) spent no money on other purchases out of the park (see Figure 144).

Visitor expectations

Visitor groups were asked if there was anything specific which they were unable to see or do during their visit, and the reasons why. Seventy-five percent of visitor groups indicated there wasn't anything that they had not been able to see or do (see Figure 145). Twenty-five percent of visitor groups responded that there were things that they had not been able to see or do. Some of these were: taking the glass-bottom boat tour, catching fish, and visiting the lighthouse. Please see Table 8 for a full list of things visitors could not see or do. The reasons that visitors could not participate in the above activities were, respectively: the glass-bottom boat was not working, the fish were not biting, and the lighthouse was under repair. Please see Table 9 for the reasons why.

Information was misleading	2
Park closes too early	2
Rangers had no information	2
No music allowed	17

Overall quality of visitor services

Visitor groups were asked to rate the overall quality of the visitor services provided at Biscayne National Park during this visit. Most visitor groups (88%) rated services as "very good" or "good" (see Figure 146). Only 1% of visitor groups rated the overall quality of services provided at Biscayne NP as "very poor."

Figure 146: Overall quality of visitor services

Visitor groups were asked, "What did you like most about your visit to Biscayne National Park?" Eighty-eight percent of visitor groups (333 groups) responded to this question. A summary of their responses is listed below in Table 10 and complete copies of visitor responses are contained in the appendix.

**Biscayne National Park Visitor Study
Additional Analysis
VSP Report 125**

The Visitor Services Project (VSP) staff offers the opportunity to learn more from VSP visitor study data.

Additional Analysis

Additional analysis can be done using the park's VSP visitor study data that was collected and entered into the computer. Two-way and three-way cross tabulations can be made of any of the characteristics listed below. Be as specific as possible-you may select a single program/ service/facility instead of all that were listed in the questionnaire. Include your name, address and phone number in the request.

- Sources of information this trip
 - Sources of information future trips
 - Reasons for visiting
 - Visit fit into travel plans
 - Primary destination
 - Forms of transportation (land)
 - Forms of transportation (water)
 - Activities
 - Activity location zone
 - Sites visited
 - Sites visited (order)
 - Overnight stays within Miami and/or Florida City/ Homestead area
 - # nights spent in Florida City/ Homestead area
 - # nights spent outside in Miami area
 - Type of lodging in Florida City/ Homestead area
 - Type of lodging outside in Miami area
 - All other purchases in park
 - Hotel/ motel expenditures out of park
 - Camping fee expenditures out of park
 - Guide fee expenditures out of park
 - Restaurant and bar expenditure out of park
 - Marina where trip began
 - Place where trip began
 - Days spent at park
 - Hours spent at park
 - Use of visitor services and facilities
 - Importance of visitor services and facilities
 - Quality of visitor services and facilities
 - Effects of park elements
 - Importance of protecting park resources
