

No-Cost Invasive Species Outreach Materials

Together we can raise awareness and reduce the impacts of invasive species.

Purpose

The purpose of the INVASIVE project is to provide educational materials and communication tools to Tribal Nations to reduce the impacts of invasive species on cultural, natural, and agricultural resources.

Project Director

Dr. Joey Hulbert

Fully Funded Outreach Materials

Contact Joey to request outreach materials. Posters or other communication tools can be co-designed with your community or departments to raise awareness of your priority invasive species concerns. Once you like the design, we will produce and deliver the materials to you at no cost.

Project Funding

The 'Increasing Native Vigilance, Awareness and Surveillance of Invasions via Education (INVASIVE) Project' was funded by the FY2022 USDA APHIS Plant Protection Act Section 7721. A total of \$77,763 was awarded for Agreement Number 5.0595 (see [APHIS FY22 Spending Plan](#)). This agreement includes \$11,800 to produce educational materials and \$11,926 for travel to offer workshops and site visits. [Contact us](#) to order educational materials while funding lasts.

Project Scope

Current funding only supports production of outreach materials for Tribal communities with traditional homelands overlapping Washington State. However, communities outside of Washington are still encouraged to contact Joey because additional funding can be requested when needs are demonstrated.

Project History

This project is a continuation of projects previously led by Dan Fagerlie, WSU CAHNRS Tribal Liaison, and only possible because of his mentorship and support. Dan can still be reached at fagerlie@wsu.edu with any questions.
