## **Rationale For Course List Changes**

### **Adding Psych 523 and Psych 529 to Experimental psychology core course options.**

Psych 523 (Health Psychology) and Psych 529 (Occupational Health Psychology) reflect the research interests of faculty and students in the Experimental Psychology doctoral program. Adding these courses to the core options list reflects the current research interest of the faculty and ensures students pursuing health-related research get the necessary background.

**Changing required courses from core course list to 3 courses.** The current requirement is for students to take two courses from the core course list. Given that there will be more course options with the approval of adding Psych 523 and Psych 529 to the core course list, the Experimental program faculty voted to increase this requirement to three courses. Doing so ensures more background in a variety of topics related to Psychology. Note that this does not change the overall graded course requirements, but rather removes a required elective course.

**Removal of Psych 591 (Principles of Learning) from the course catalog.** There are no plans to offer this course in the future. Students who are interested may take Psych 491. Of the 26 required graded credit hours to earn a PhD in this program, 6 credits can be earned from upper division undergraduate courses.

These changes have been voted on and approved by the Experimental Psychology program faculty.
