

College of Pharmacy and Pharmaceutical Sciences

**Proposal:
BS in Pharmaceutical and Medical Sciences**

WASHINGTON STATE
 UNIVERSITY

B.S. Pharmaceutical and Medical Sciences

1. Unique and innovative transfer program – 2 years of coursework elsewhere, then 2 years (Jr/Sr) on the Spokane campus
2. Partnership between the Colleges of Pharmacy & Pharmaceutical Sciences and E.S. Floyd College of Medicine. Existing faculty members have the necessary expertise for the courses.
3. The innovative curriculum includes “soft skills” and is designed to prepare students for further training in the health sciences, graduate school or direct employment in pharmaceutical biotechnology sector in Spokane county and across the state.
4. Enrollment is capped at 50 students/year, due to classroom capacity in Spokane.
5. Articulation agreement in preparation with Community Colleges of Spokane that would link CCS graduates to reserved seats in the proposed program. CCS graduates more than 1,000 students per year who would qualify for the proposed program, and we intend to reserve well over half the seats in each cohort for CCS students.
6. The Provost's office has determined that this program is not duplicative with other WSU offerings.
7. This program is unlikely to harm existing programs in the WSU system because our target demographic is CCS graduates in Spokane county.
8. Consistent with the WSU vision, this program is designed to serve our community in Spokane County.

"Washington State University will deepen and expand its impact by building on the strengths of each campus and location for a stronger Washington state and global community."
