

University of Idaho – Washington State University
Bi-University Guest Seminar Series in Entomology (BUGSS)

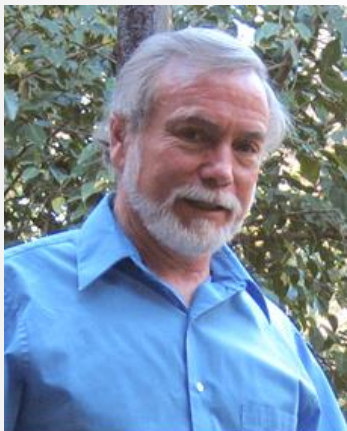

GENETICALLY ENGINEERED PESTS AS TOOLS FOR APPLIED ENTOMOLOGY?

Tuesday, September 19

3:30 – 5:00 p.m.

International Ballroom
Bruce M. Pitman Center
University of Idaho

Fred Gould, Ph.D.
Department of Entomology
North Carolina State University

Dr. Gould conducts research and teaches on the population genetics of pests and its applications for ecologically sound management approaches. In this presentation, he will provide a summary of theoretical, experimental, and practical issues being addressed by researchers attempting to genetically suppress or alter characteristics of insect pest populations.

This seminar is supported in part by the Lowell T. Farmer Endowment to the University of Idaho
