## Introduction

In the Spring of 2008, Lisa Johnson-Shull, Diane Kelly-Riley, and Jared Anthony of the Washington State University Writing Program investigated several options for constructing a document management system that would manage workflow for the review of writing-in-the-major courses, be a repository of course syllabi, and allow data extraction based on multiple types of search criteria. Because the Writing Program had an existing relationship with The RiCH Company (subscription to WOnline for scheduling in the Graduate and Professional Writing Center) and because the company could deliver a product that would not have platform compatibility problems and would not require a large capital investment, Lisa and Diane contracted with The RiCH Company to custom build a document management system (DMS).

The DMS is available at [wsumcourse.com](http://wsumcourse.com). We were not able to get a .edu domain because the federal government regulates that top-level domain, through Educause, to be available only for complete institutions of higher learning. A program or office within an institution must branch from the main institution's domain, not set up its own.

## Major Features

The WSU M-course Review DMS is a fully-customized, subscription-based, Web-only software system. Major features of the system include

- online registration accessible from the main URL ([wsumcourse.com](http://wsumcourse.com))
- registration requests generate email message to administrator
- administrator designates permissions at one of three levels (administrator, reviewer, faculty)
- administrator can also initiate user profiles without registration
- upon creation of a profile, email confirmation is sent to user with link to URL
- users can upload .doc, .docx, and .pdf files from any computer
- administrator gets an email notification that a document has been uploaded
- administrator can add comments to the document and either approve it for all viewers to see or route it to a specific reviewer
- reviewer gets an email notification that a pending document awaits review
- reviewer adds comments to the document
- upon reviewer confirmation that review is complete, system emails notification to administrator
- administrator sees comments added to pending documents, by whom, and when added
- all users can perform a search by key word(s) or designated best practices that retrieves all syllabi thus marked

## Faculty Walkthrough

Two methods exist for gaining access to the DMS:

- User-initiated registration
- Administrator-initiated registration

If an administrator initiates registration, the user will receive an email notification with a link to the DMS URL.

For **user-initiated registration**, follow these steps:

- Point Internet browser to [wsumcourse.com](http://wsumcourse.com)
- Click on “Register” in the left side navigation bar (see Figure 1 below)

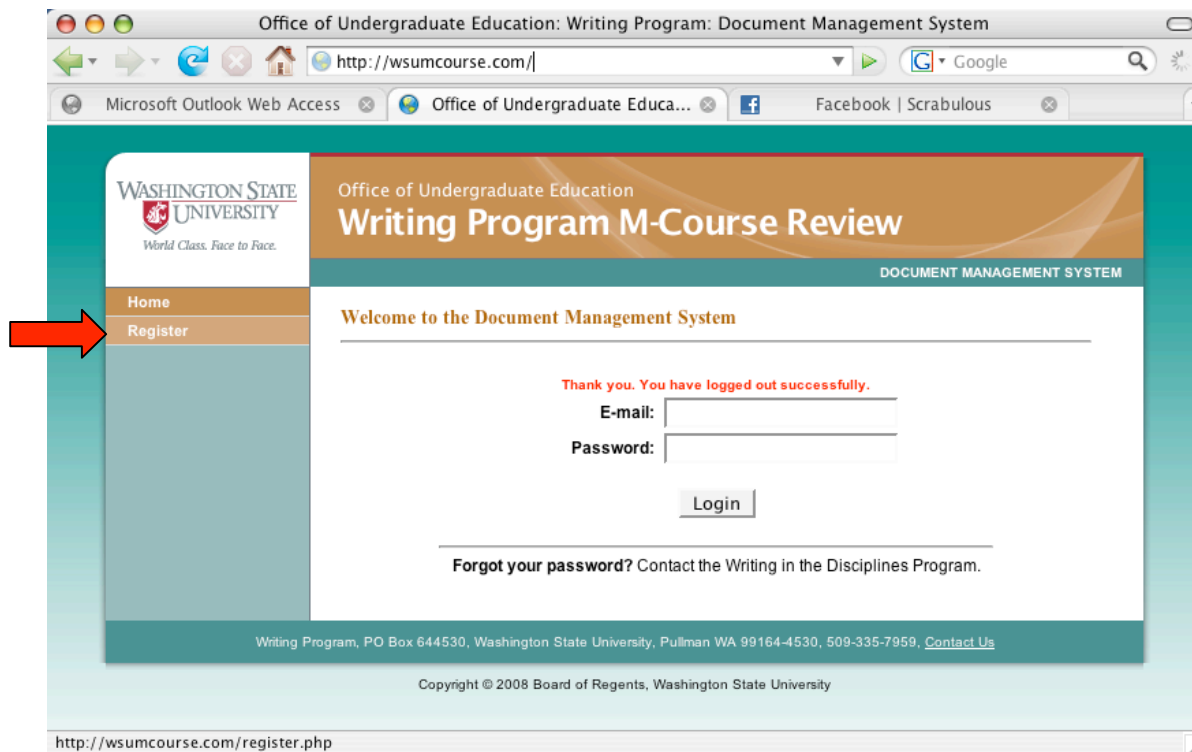

Figure 1: Home page of DMS with “Register” link highlighted.

A new screen will appear (see Figure 2), in which you can fill out a form with your name, email address, and a password of your choosing. Click on “Complete Registration,” and an email notification will be sent by the system to the administrator. Upon approval by the administrator, an email notification will be sent back to you by the system. That message will include a link to the DMS home page (Figure 1), on which you can enter your email address and password to log into the system.

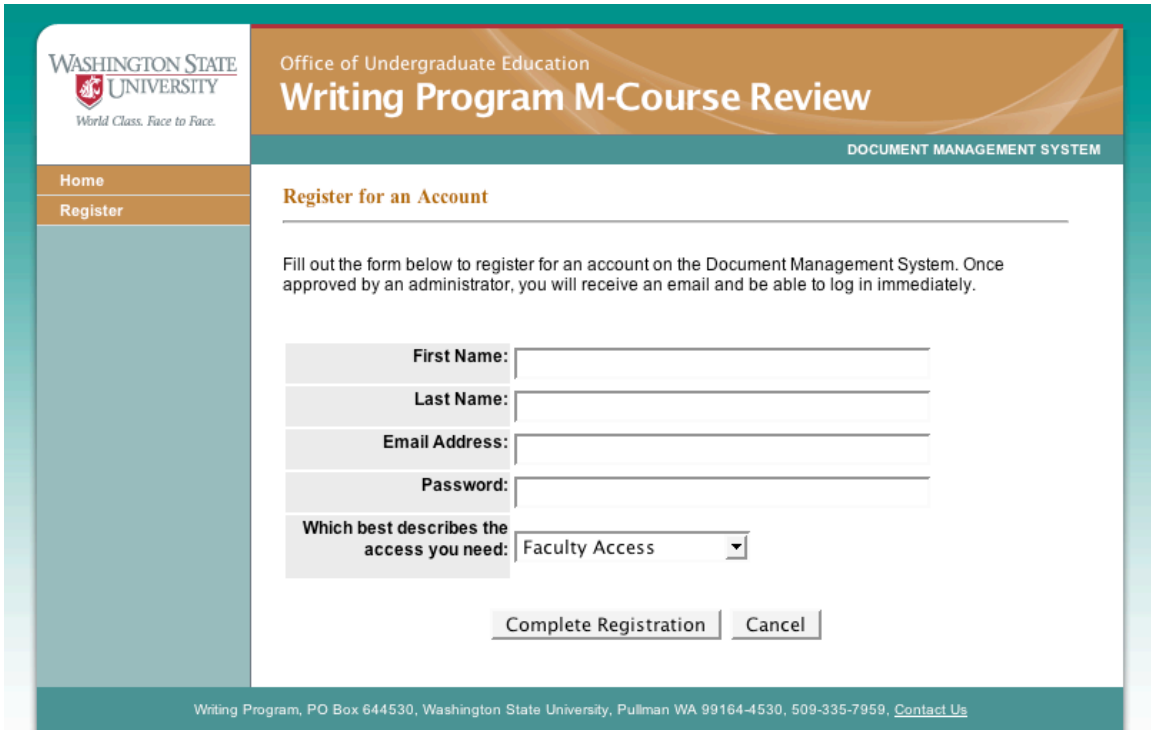

Figure 2: Registration page of DMS.

Once registered and logged in, a faculty user has three available options: Upload a Document, Browse Documents, and Search Documents. These options are listed in the left side navigation bar (see Figure 3).

Figure 3: Welcome screen for Faculty users.

**To Upload a Document**, click that link in the navigation bar, fill out as many fields as possible on the form that appears, and click the “Browse” button in the center of the form to retrieve the document from your computer’s file system (see Figure 4). Note that the system can only accommodate files with .doc, .docx, and .pdf extensions. Once you’ve selected the document, click the “Add Document” button at the bottom of the screen. The system will generate an email notifying the administrator that a new document has been submitted for review.

The screenshot shows the 'Upload a Document' form within the Washington State University Document Management System. The navigation bar on the left includes links for 'Logout', 'Upload a Document', 'Browse Documents', and 'Search Documents'. The main form area is titled 'Upload a Document' and contains the following fields and instructions:

- Document Title:** A text input field.
- Document Description:** A text input field.
- Document Keywords:** A text input field with a note: "Separate keywords and keyword phrases by commas."
- Initial Comments:** A text input field.
- Upload Document:** A text input field with a "Browse..." button to its right.
- Instructor Name:** A text input field.
- Course Prefix:** A text input field.
- Course Number:** A text input field.
- Department:** A text input field.
- GenEd Category:** A text input field.

At the bottom of the form is an "Add Document" button. Three red arrows are overlaid on the image: one pointing to the 'Upload a Document' link in the navigation bar, one pointing to the 'Browse...' button, and one pointing to the 'Add Document' button.

Figure 4: Upload a Document form.

**Browse Documents** allows you to select any document in the system from a pull-down list of document titles (see Figure 5). Clicking on a document’s title from the list will provide access to all comments and descriptors that have been attached to the document. You can download a copy of the file itself by clicking on the blue “click to download” link. You can also add a comment that will become attached to the file by typing in the box at the bottom of the screen and clicking the “Save Comments” button (see Figure 6).

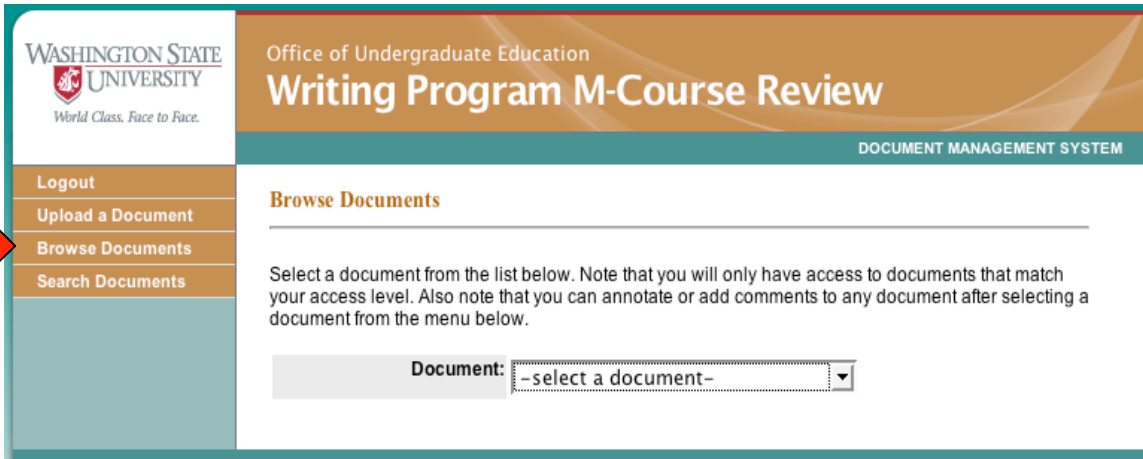

Figure 5: Browse Documents pull-down menu.

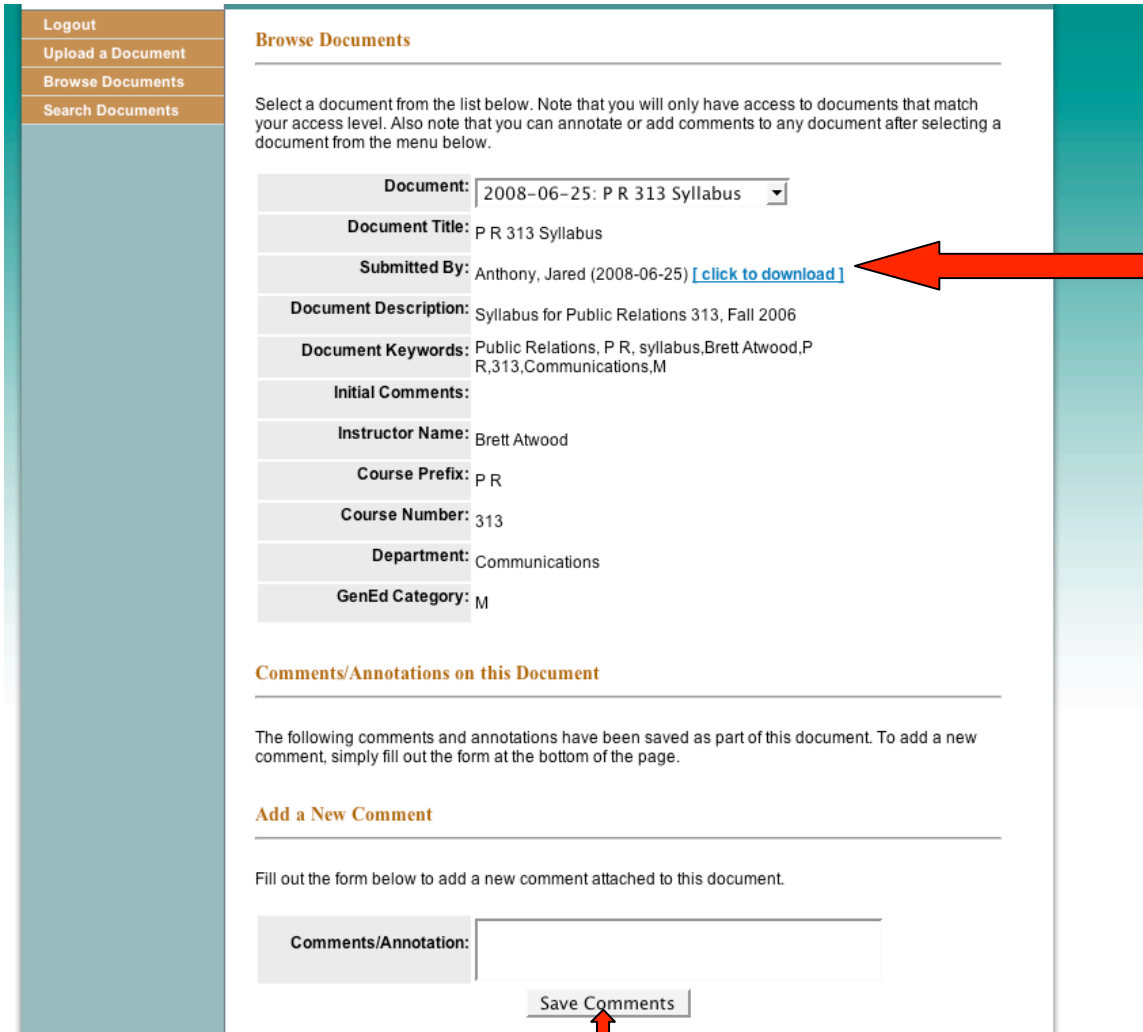

Figure 6: Browse Documents results page, with download link in blue.

**Search Documents** will retrieve documents either by keyword match or Best Practice match. Best practices are comment tags added by administrator. They function as a separate type of keyword and are available as a set of preset search terms from a pull-down menu. Figure 7 shows results from an “Authentic Projects” Best Practice search.
