PREVIOUS RESEARCH

Assistant and Associate Professor, 2009 to present, and, *Department of Biological Systems Engineering and Bioproducts, Sciences & Engineering Laboratory, Washington State University – Tri-Cities, Richland, Washington*. The current research interests lie in areas of pretreatment, enzymatic hydrolysis, catalytic, and biological pathways that accelerate commercial application of biomass processing to fuels and chemicals.

Associate Research Engineer, 2006 to 2009, *Bourns College of Engineering, Center for Environmental Research and Technology (CE-CERT), University of California, Riverside, California*. Led research on advancing technologies for releasing sugars from cellulose and hemicellulose fractions of biomass by pretreatment and enzymatic hydrolysis, recovery and fermentation of derived sugars to ethanol.

Research Scientist, 2001 to 2006, *Thayer School of Engineering, Dartmouth College, Hanover, New Hampshire*. Served as co-PIs for research projects on hydrolysis of cellulosic biomass by enzymes and chemicals. Invented a novel lignin blocking technique that significantly improved enzymatic hydrolysis of pretreated biomass at lower cost. Comparative research on batch and flowthrough pretreatment to put in-depth insights on cellulose digestion and removal of both lignin and hemicellulose. In addition, conducted research on integration of an advanced cellulose-producing ethanologenic bacteria with pretreatment to significantly reduce the cost of ethanol from biomass and the USDA project “Coordinated Development of Leading Biomass Pretreatment Technologies”.

Post-doctoral Scholar, 1998 to 2001, *Wood Science Department, University of British Columbia, Vancouver, Canada*. Performed research on steam explosion of wood wastes, including *Douglas fir, SPF, Jack pine, and Aspen* wood, to maximize product yields and determine mass balance. Developed a fractionation technique for hemicellulose, lignin, and cellulose recovery. Performed research on adsorption of cellulases and changes in cellulase activities during hydrolysis of steam-pretreated softwood substrates and establishment of evaluation index of recycled cellulase.

Post-doctoral Fellow, 1996 to 1998, *College of Life Science, Huazhong Agricultural University, Wuhan, China*. Evaluated the fermentation kinetics and genetic stability of engineered *Streptomyces* strain WH-1 and *Streptomyces hygroscopicus* 10-22 for high-level antibiotic

production. Developed overproduction of clavulanic acid with *Streptomyces clavuligerus* through genetic engineering approaches.

Chief Scientific Advisor, 1995-1998, *HuanTai Food & Biotechnology Inc., Shenzhen, China*. Designed and involved in operating the first bagasse dietary fiber plant in China with 100 ton/year production capacity.

Research Associate, 1986 -1990, *Shaanxi Institute of Microbiology, Chinese Academy of Science*. Participated in National 75 Key Project “Cellulase DNA Cloning”, responsible for cloning and expression of cellulase DNA fragments from *Sporayotophaga* into *E. coli* JM83. Participated in the first demonstration project “application of cellulase A10 for petroleum fracturing fluids”. Developed *Aspergillus flavus* K2 with high neutral protease and saccharogenic amylase activity and improved soy sauce productivity.
