

ANAND JAYAKARAN, PH.D., PE **Associate Professor and LID Specialist**

Can Low Impact Development Fix the Urban Stream Syndrome?

The talk will focus on the transformation of hydrologic processes associated with land use change, and how engineering using ecosystem-centric principles could lead to the better management of surface runoff in urbanizing watersheds. Ani will outline some of his work and those done by colleagues at three spatial scales, as well as relating past efforts to current work that promote the use of Low Impact Development techniques in the state of Washington.

Date: Monday, November 2, 2015

Place: Sloan 175

Time: 4:10 p.m.—5:00 p.m.
